1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: the specification on page 1 has been amended to reflect the patent number of S.N. 09/908,011 as well as the status of 09/909,274 (abandoned).

2. The following is an examiner's statement of reasons for allowance: the Examiner has not found any prior art that would render obvious the claimed method for aligning data bits in positioning signals including the determination of a sum and difference for each of the pairs of claimed stacks, evaluation of the results of the sums and differences to identify peaks, and aligning the data bits based on the magnitude of the peaks.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4. Eynon et al disclose cell testing strategies including Immediate Rejection, Two-Step Rejection, and Up-Down Counter as well as a serial search analysis for acquisition of DSSS signals. Ng et al (6,847,676) disclose a spread spectrum correlator for determining correlation peaks and using the correlation peaks to align data bits for subsequent processing. Krasner (6,289,041) discloses a fast acquisition GPS receiver that stacks (706)/substacks (712) a received signal for generating matched filter data used to acquire a received positioning signal. Bloebaum (6,295,023)

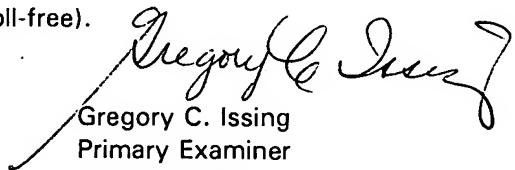

Art Unit: 3662

disclose a method for acquiring timing information (Figure 11) wherein a stack formed of a plurality of substacks (CB0) and PBO are summed and the summed result is differenced. Abraham et al (6,606,346) disclose a method for acquisition of a positioning signal (GPS) by generating a plurality of partial correlations and subsequent summing to produce a plurality of full convolution results.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory C. Issing whose telephone number is 703-306-4156. The examiner can normally be reached on Monday - Thursday 6:00 AM- 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on 703-306-4171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
